GRADUATION THESIS

**Application of matrix decomposition technique in
launching e-book recommendation system**

ACKNOWLEDGMENT

First and foremost, I would like to express my sincere gratitude to the subject teachers at Hanoi University of Science and Technology for their continuous guidance throughout my study, especially ones from the School of Information and Communication Technology.

I thankfully acknowledge the support of Assoc. Prof Cao Tuan Dung for their unwavering support and guidance throughout these years.

My appreciation also extends to my company colleagues, I'm very happy to have had the opportunity to work with all of you, especially brothers Nguyen Duc Tai and Phan Huy Dung, who are dedicated to helping me to improve my programming skill. I would also like to send my sincerity to other members of the Falcon Squad Team, leader Nguyen Xuan Tung, brother Nguyen Khanh Nam, sister Tran My Hanh, Bui Quang Huy, etc. And members of my club, brothers Do Thai Hoa, Tran Tan Dung, and Nguyen Dinh Duy Thong.

In the CTES (Center for Training of Excellent Students) volunteer team, my gratitude goes to all of the members. We've shared our experiences in life and work as brothers.

My student's life must be harder without the following idiots: Phan Viet Hoang, Nguyen Phi Phuc, Khanh Doan, Nguyen Duc Long, Pham Tran Anh, Tan Dubai, and Nguyen Tien Long. They are my best friends for the last four years. I'm also very grateful to my closest friends, Phan Thanh Hung and Pham Thi Viet My who are always by my side to help me in the most difficult times.

Last but not least, this thesis is dedicated to my parents Vo Hong Son and Nguyen Thi Luyen for the two decades of your love and support. I would not have come this far without your loving weight behind me.

ABSTRACT

E-commerce is currently developing and offering a ton of convenience to clients. Because of the variety of models available, it might be challenging for people to make a decision online. Furthermore, the phenomenon of the long tail is very common in commerce; the best-selling products make up a very small portion of the total products, while the long list behind them only contributes very little. The product might not be personalized for the user.

Therefore, the recommender system is required when the user has too many options or when he is unable to define his requirements at the beginning of the shopping session in a clear and comprehensive manner. Online stores are gradually implementing the recommendation system, particularly significant e-commerce platforms like Shopee, Amazon, Netflix, etc. have excellent systems.

In this thesis, we propose the steps to build a website that sells books having a built-in recommendation system. The system's front-end and back-end are built using the Ionic framework and Asp.net. Specially, we construct two recommender algorithms specifically for the system and evaluate their effectiveness.

TABLE OF CONTENTS

CHAPTER 1. INTRODUCTION.....	1
1.1 Research Objectives	1
1.2 Contributions	3
1.3 Organization of Thesis	4
CHAPTER 2. THEORETICAL BASIS.....	5
2.1 Framework.....	5
2.2 Matrix Utility	7
2.3 Recommendation System	8
2.3.1 Content-Based Filtering.....	8
2.3.2 Collaborative Based Filtering	8
CHAPTER 3. SYSTEM DESIGN AND IMPLEMENTATION	12
3.1 Field survey	12
3.2 Functional requirements	13
3.2.1 Business Process.....	13
3.2.2 Actor	14
3.2.3 Usecase Diagram	14
3.2.4 Decomposition Chart	15
3.2.5 Usecase Specification.....	18
3.3 System structure modeling.....	18
3.4 Modeling interaction.....	19
3.4.1 Design overview	20
3.4.2 Package detail design	21
3.5 Others Usecase.....	22

CHAPTER 4. RECOMMENDER ALGORITHMS DEPLOY	23
4.1 Data description	23
4.1.1 Histogram of average ratings and ratings count	23
4.1.2 Histogram of ratings count for each rating value	24
4.1.3 Histogram of work ratings count and work text reviews count	24
4.1.4 Number of books by language code	24
4.1.5 Number of books over time	25
4.1.6 Histogram of rating times by users and books	26
4.1.7 Number of times for each rating values	26
4.2 Train-Test Split	27
4.3 Content-based Deploy	27
4.4 Item-item Deploy.....	28
4.5 Matrix factorization Deploy.....	28
CHAPTER 5. RESULT VALUATION	30
5.1 User Interface.....	30
5.2 Algorithm Performance.....	33
CHAPTER 6. CONCLUSIONS	35
6.1 Summary	35
6.2 Suggestion for Future Works	35
REFERENCE	37
APPENDIX	38
A. USE CASE DESCRIPTIONS.....	38
A.1 Use Case Login	38
A.1.1 Class diagram	38
A.1.2 Activity Diagram	38
A.1.3 Usecase Specification.....	39

A.2 Use Case Logout.....	40
A.2.1 Class diagram	40
A.2.2 Activity Diagram	41
A.2.3 Usecase Specification	42
A.3 Use Case Register	43
A.3.1 Class diagram	43
A.3.2 Activity Diagram	43
A.3.3 Usecase Specification	44
A.4 Use Case Search Product	45
A.4.1 Class diagram	45
A.4.2 Activity Diagram	46
A.4.3 Usecase Specification	46
A.5 Use Case View product information	47
A.5.1 Class diagram	47
A.5.2 Activity Diagram	48
A.5.3 Usecase Specification	49
